QUESTIONS

What is the role of road infrastructures in the Smart Mobility era?

Is that possible to build up smart mobility without smart infrastructures?

THE NEW ERA FEATURES AND TRENDS

THE NEW ERA MAIN FEATURES

CONNECTED CARS

Equipped with sensors
Sense the physical internal and external environment
Internet access
Interact with other vehicles and entities

AUTONOMOUS VEHICLES

(automated self-driving vehicles
or robotic cars)
Operate without a human driver

Automated platooning is one of the first steps toward automated driving

DRIVING FORCES

AVAILABLE TECHNOLOGY

New technology available at low prices
5G communications – Internet of things
Artificial intelligence
Smart sensors

HIGH-TECH PLAYERS

30 companies permitted to test autonomous vehicles
(Apple, Google, Tesla, Uber, Bosh, Toyota, Mercedes,
Ford, Volvo, ...)

NEW MOBILITY CONCEPTS

Sharing society
Increasing changes in urban customers

Evolving regulatory and policy constraints

ADDRESSING ISSUES

LEGISLATION AND REGULATIONS

Decarbonization
Self-driving vehicle - legal entity
Data ownership and privacy
Cyber-Security
Liability and insurability

COLLABORATION

European-level initiatives – Declaration of Amsterdam
New partnerships for R&D (OEMs, suppliers, new entrants)
Testing on public roads

INFRASTRUCTURES

Adaptable, Automated and Recycled

THE ROLE OF ROAD INFRASTRUCTURES

WHY INFRASTRUCTURE MATTERS?

Connects people and goods

Enables trade

Powers businesses

Social and economic development

Backbone of a healthy economy

OPERATING SKILLS TODAY

Capacity and demand management

Traffic control and safety demand management

Incidents/accidents response management

Traveller information and guidance

Reactive to proactive approach

OPERATING SKILL TOMORROW (?)

Smart sensors,
remote sensing

V2I, I2V, I2I, 5G
communications

IOT architecture

External/Social
data integration

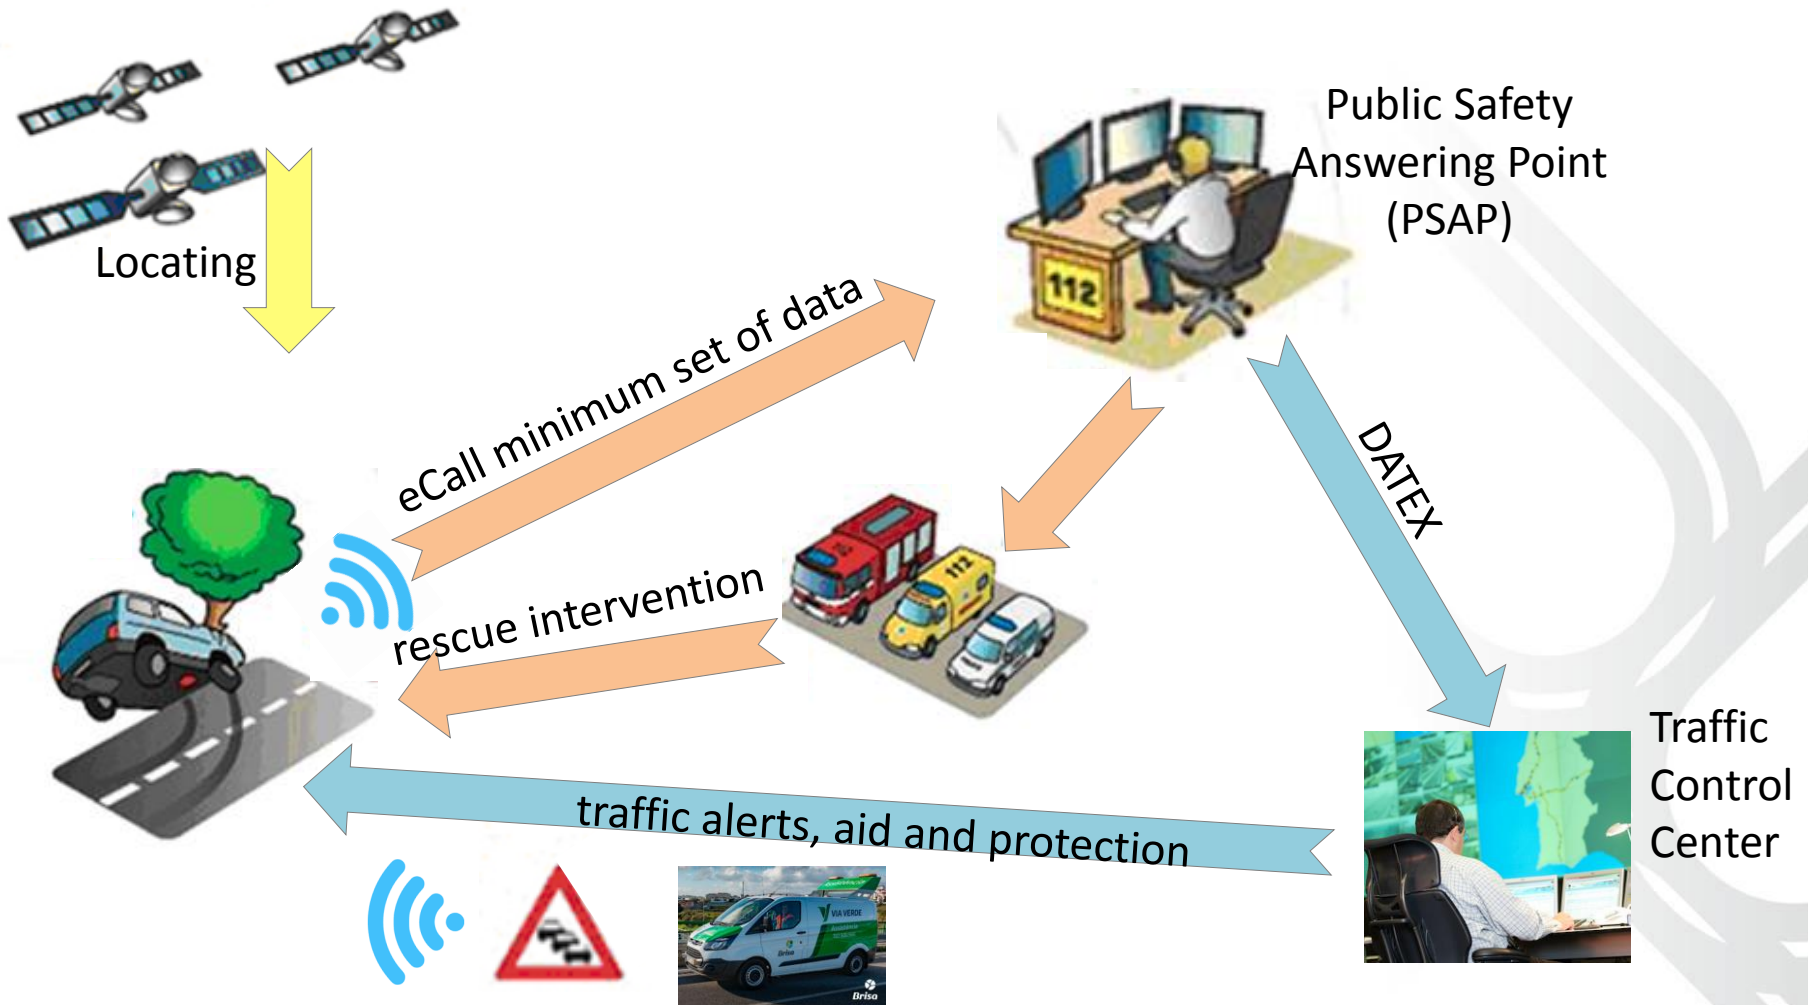

Advanced
analytics

INITIATIVES AT BRISA

eCALL FULL INTEGRATION

eCall in all new cars from April 2018

BRISA'S INTELLIGENT MOTORWAYS

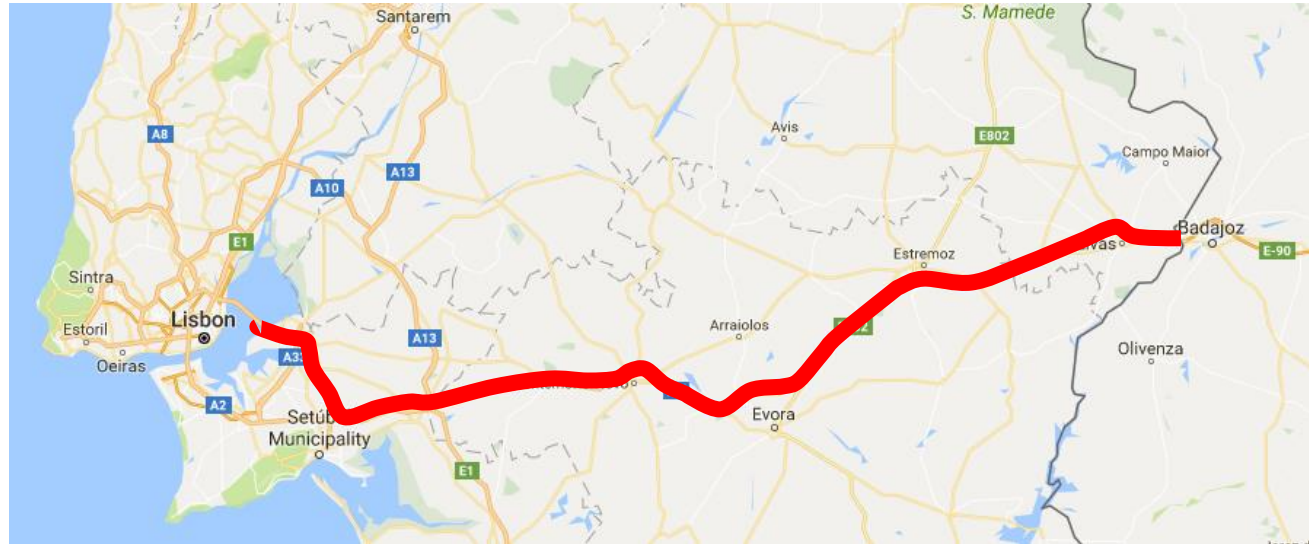

THE PLATOONING ROAD

Lisbon-Badajoz
(Spain border)
corridor

190 km

5,000 AADT

Smart
sensors

V2I, I2V,
I2I, 5G

IOT

Analytics

Test bed for truck/car platooning

THE HOLIDAY ROAD

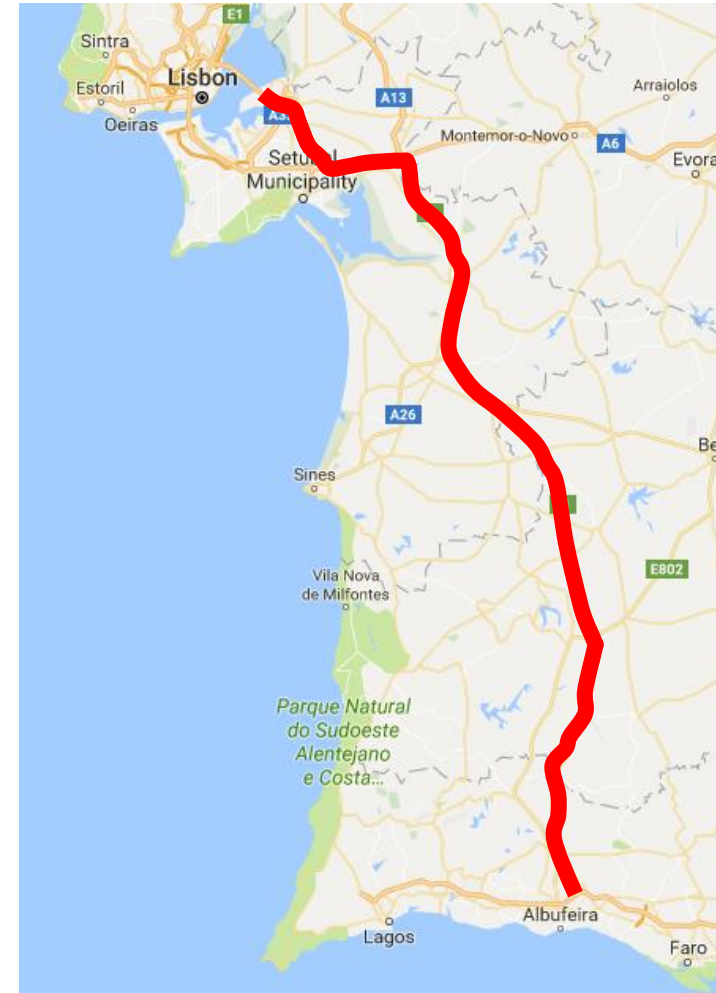

Lisbon-Algarve coast
corridor

250 km

16,000 AADT

Test bed for
autonomous
driving

BRISA'S INTELLIGENT MOTORWAYS

C-ROADS project proposal

2 M€ investment

Work Plan 2017-2021

CONCLUSIONS

CONCLUSIONS

What is the role of road infrastructures in the Smart Mobility era?

It continues to be the system's backbone and will be at the heart of the "Smart Mobility" era.

Is that possible to build up smart mobility without smart infrastructures?

Yes, but it won't be the same.

Intelligent infrastructure will be required to collect, process and disseminate a vast amount of data in real time and provide the most effective transportation services to businesses and citizens alike.

The role of road infrastructures in the smart mobility era

JORGE LOPES – BRISA
