## Index

- Globalvia
- Globalvia Portuguese Concessions
- C-ITS Projects
- C-ITS to enhance traffic management
- Final notes

# GLOBALVIA

## SPAIN

16 concessions  
+ 1 high-speed rail

## UNITED STATES

1 concession

## PORTUGAL

2 concessions

## IRELAND

3 concessions  
+ Go-Ahead Group buses

## COSTA RICA

1 concession

## CHILE

5 concessions

## UK

Go-Ahead Group rails and  
buses

## NORWAY

Go-Ahead Group rail  
services

## GERMANY

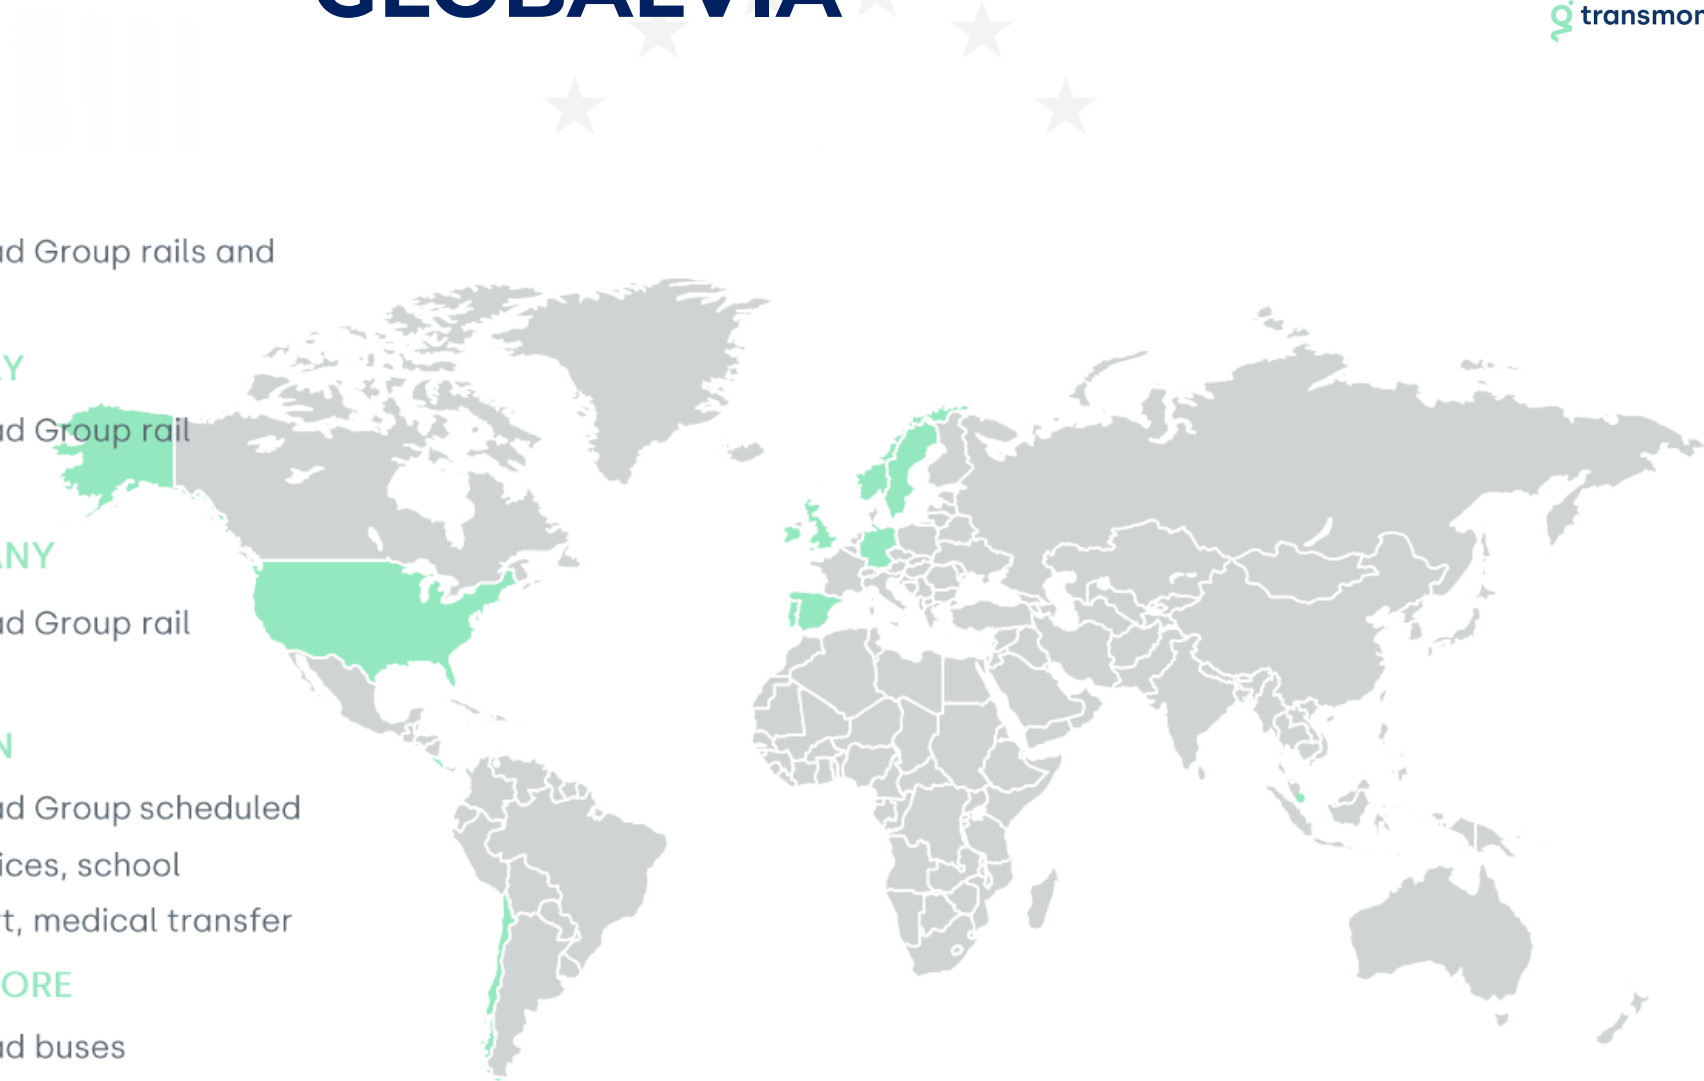

Go-Ahead Group rail  
services

## SWEDEN

Go-Ahead Group scheduled  
bus services, school  
transport, medical transfer

## SINGAPORE

Go-Ahead buses

# GLOBALVIA PORTUGUESE CONCESSIONS

CONCESSIONS		INFRASTRUCTURES		ITS	
Locations	<b>Beira Interior</b> - A23 Abrantes – Guarda (177,5)	Interchanges	53	VMS	52
	<b>Transmontana</b> - A4 Vila Real – Bragança (134,7 km)	Services Areas	7	Surveillance cameras	120
Total extension	312,2 Km	Tunnels	4	Electronic Signalling	77
Grantor	Portuguese State	Bridges	32	IAD Cameras	78
		Structures	426	Traffic Countings	55
		Maintenance depots	5	SOS	391
		Traffic Control Center	2	Environment sensors	60
				Ventilators	31
				UPS/ Generators	14
				Toll Sites (MLFF)	15

# C-ITS PROJECTS

## C-ROADS GARDUNHA TUNNEL PILOT

• **Consisted:**

- Creation of a V2X (Vehicular-to-everything) communications network in the Gardunha Tunnel area in A23 Beira Interior Concession.

• **Involved:**

- Installation of RSUs and OBUs equipments;
- Software development for C-ITS services;
- Interoperability testing and monitoring.

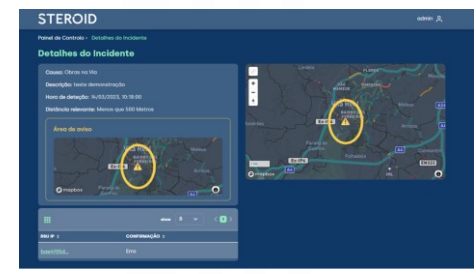

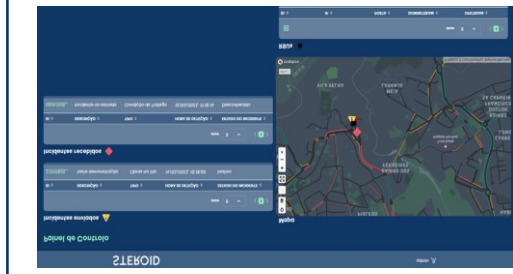

• **Additional:**

- Installation and integration of Waze Beacons for the dissemination of GPS information inside the tunnel.

C-Roads Gardunha Tunnel Pilot was part of the C-Roads Portugal consortium (led by IMT)

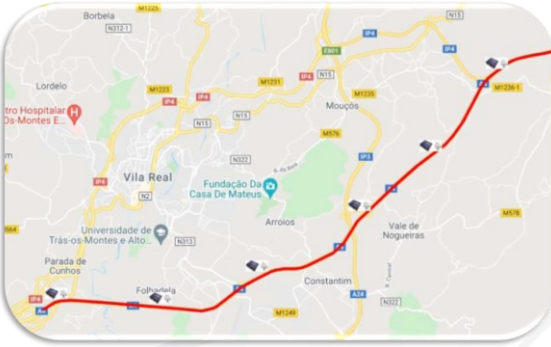

# C-ITS PROJECTS

## STERIOD

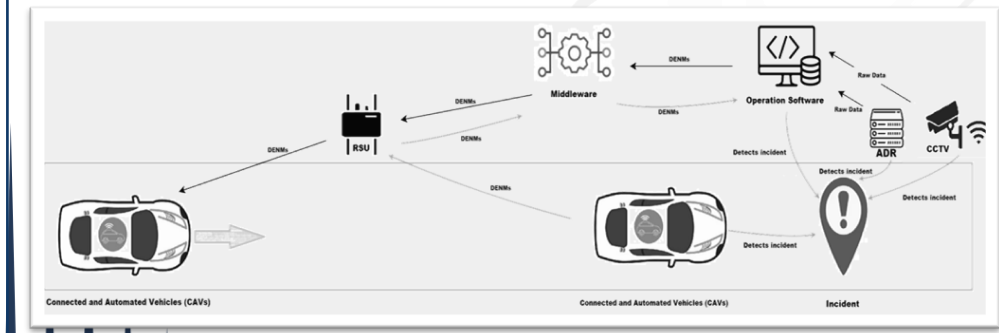

**Consisted:**

- Creation of a V2X with the protocol ITS-G5 communications network in the A4 Transmontana Concession (15 Km Length).

**Involved:**

- Installation of RSUs and OBUs equipments;
- Software development for C-ITS services;
- Integration with AI CCTV to detect road incidents;

**Additional:**

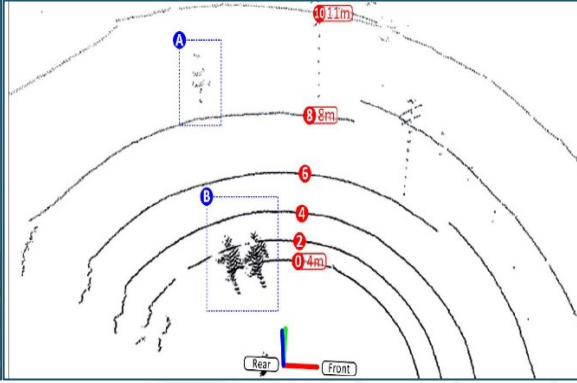

- Use of legacy ITS (Traffic Counting Stations and Meteos) cases to detect road incidents with legacy ITS (Traffic Counting Stations and Meteos).

# C-ITS PROJECTS

## 5GAUTO

<p><b>lte 4G</b>  <b>Enhanced V2X</b>                  C-V2X 3GPP Rel 14</p> <p><b>WiFi</b>  <b>Basic V2X</b>                  IEEE 802.11p                  ITS G5</p> <ul style="list-style-type: none"> <li>• V2V, V2I</li> <li>• Safety</li> </ul>	<p><b>Advanced V2X</b>                  C-V2X 3GPP Rel 15 and future Rel 16, etc</p> <ul style="list-style-type: none"> <li>• Longer range</li> <li>• Higher density</li> <li>• Very high throughput</li> <li>• Very high reliability</li> <li>• Wideband ranging and positioning</li> <li>• Very low latency</li> </ul>	
<p>Situação atual</p>		<p><b>5GAUTO</b></p>

- **Consisting of:**
  - Investigate, develop and test hardware and software solutions to support C-ITS services over 5G V2X radio telecommunications infrastructure. The project took place in A23 Beira Interior Concession.

	
<p>RSU 5G V2X in A23</p>	<p>LIDAR technology for people and obstacles detection through AI</p>

- **Involved:**
  - Develop radio equipment to support vehicular communication and autonomous driving;
  - Explore and apply MEC technology over 5G;
  - Investigation of AI algorithms;
  - Development of C-ITS service management platform.

# C-ITS TO ENHANCE TRAFFIC MANAGEMENT

With the development of the various projects, we had the opportunity to test in practice several use cases that help to enhance traffic management.

By centralizing all command in the Control Center, operators can monitor the status of Road Units and configure and send road alerts for various traffic situations, directly to the incident zone.

The Lardosa command and control center is at the core of the Beira Interior highway operation.

# C-ITS TO ENHANCE TRAFFIC MANAGEMENT USES CASES

## Road Works Warning

Vehicles driving towards the road works event get warning messages as previously configured in C-ITS Platform.

# C-ITS TO ENHANCE TRAFFIC MANAGEMENT USES CASES

## Emergency Vehicle Approaching

Vehicles inside the tunnel receive Emergency Vehicle Approaching messages, inviting drivers to slow down and drive with caution.

# C-ITS TO ENHANCE TRAFFIC MANAGEMENT USES CASES

## Road Accident Warning

A Road Accident Warning message is received before the accident becomes visible to the driver.

# C-ITS TO ENHANCE TRAFFIC MANAGEMENT USES CASES

## See-through

In this use case, a vehicle has direct access to the camera of the van that is ahead, contributing towards safe overtaking manoeuvres.

# C-ITS TO ENHANCE TRAFFIC MANAGEMENT USES CASES

## Tolling information

Broadcast of tolling related information.

Finally, the pilot has tested the broadcast of tolling related information.

# C-ITS TO ENHANCE TRAFFIC MANAGEMENT USES CASES

## Integration with third parties services

In this uses case we integrated with Copernicus Emergency Management Service

The C-ITS Platform can consume external data from 3rd party sources. During the [myEUspace](#) competition we have integrated with the [Copernicus Emergency Management Service](#) for active wildfires

## Final Notes

The C-ROADS and STERIOD pilots has shown that the ITS-G5 communication technology has reached a level of maturity that now enables cooperative systems to roll out and operate in the field.

The 5G Auto project as allowed to test new connectivity standards 5G V2X and evolve in the complexity of use cases, demonstrating bigger possibilities;

C-ITS technology opens a direct communication channel between Globalvia and the highway users, with a lot of potential for innovative and useful applications, contributing to the safety of highway users and workers and helping to reduce polluting emissions.
